Driving Growth of the Interview Feature Building Adoption, Recurring Usage & Trust

Founder’s Office Assignment

Submitted by : Afreen Laiq

Role : Product Intern

THE OPPORTUNITY

Problem

The Interview feature has the potential to become more than a content destination.

The challenge is to move users from:

One-time consumption → Repeat discovery → Habitual usage

Four growth questions

1. ADOPTION
How do we get more users to discover and engage with Interviews?

2. RECURRING USAGE
Why would a user return regularly?

3. CREDIBILITY
How do we make interviews feel valuable, authentic and trustworthy?

4. SUSTAINABILITY
How do we continuously source and distribute high-quality interviews?

Strategic Goal

Turn Interviews into a personalized, trusted and recurring reason to return to the product.

TARGET USERS & THEIR NEEDS

Who Are We Building For?

01 – Students & Freshers

Need: Understand real career paths and industry expectations.

Interview value:

Career journeys, practical advice, role insights and mistakes to avoid.

02 – Early-Career Professionals

Need: Learn from people who are further ahead in their careers.

Interview value:

Career progression, skills, decision-making and industry perspectives.

03 – Experienced Professionals

Need: Share expertise and build professional visibility.

Interview value:

Thought leadership, credibility and access to a relevant audience.

Key Insight

Users don't return for “interviews”. They return for answers, perspectives and people relevant to their goals.

VALUE PROPOSITION

From Interviews to Actionable Insights

For Users

DISCOVER
Real experiences from people in the field.

LEARN
Understand career decisions, skills, challenges and lessons.

ACT
Turn insights into next steps – skills to build, roles to explore or topics to follow.

For Interviewees

SHARE
Tell their professional story.

REACH
Connect with a relevant audience.

BUILD CREDIBILITY
Create a credible professional presence.

Core Value Proposition

“Learn from people who have already navigated the path you want to take.”

DISTRIBUTION & DISCOVERY

Make the Right Interview Visible at the Right Moment

The biggest adoption opportunity is to **bring Interviews into existing user journeys**, rather than expecting users to actively search for them.

01 – In-Product Discovery

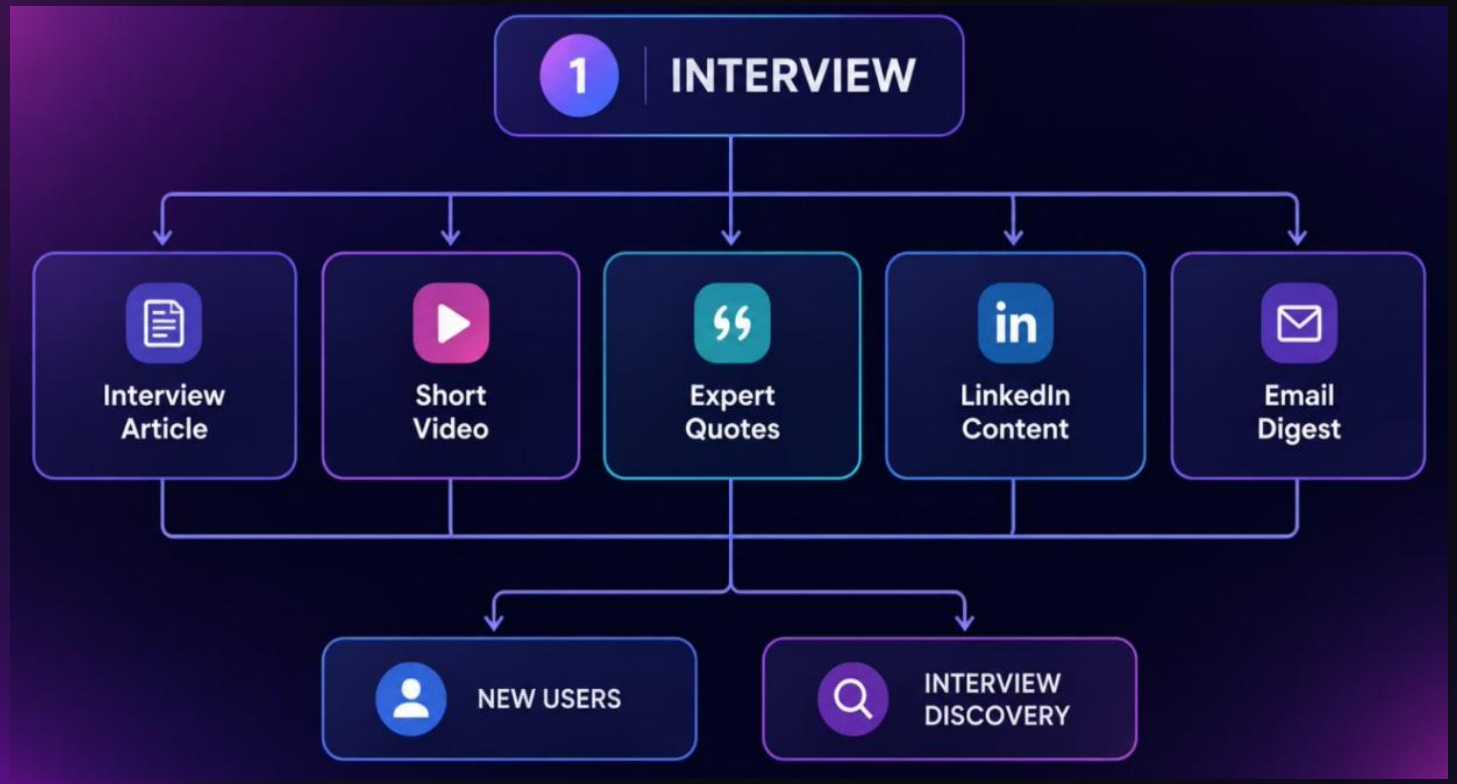

Homepage
"Recommended Interviews for You"

Search
Surface relevant interviews alongside search results.

Contextual Recommendations
Job viewed → relevant interview
Article read → relevant interview
Topic searched → relevant interview

02 – External Discovery

LinkedIn – Career insights & expert quotes
Short-form video – Strong interview moments
SEO – Searchable role/topic-based interviews
Email – Personalized weekly digest
Communities – Shareable interview stories

Distribution Principle

One interview should create multiple distribution opportunities.

ENGAGEMENT & RETENTION

Give Users a Reason to Come Back

The retention strategy should create **personal relevance + recurring content + user intent**.

01 – Follow Topics

Allow users to follow interests such as:

AI | Product | Data | Software | Startups | Design

02 – Personalized Recommendations

Recommend interviews based on:

Topics followed

Interviews viewed

Searches

Saved content

User interests

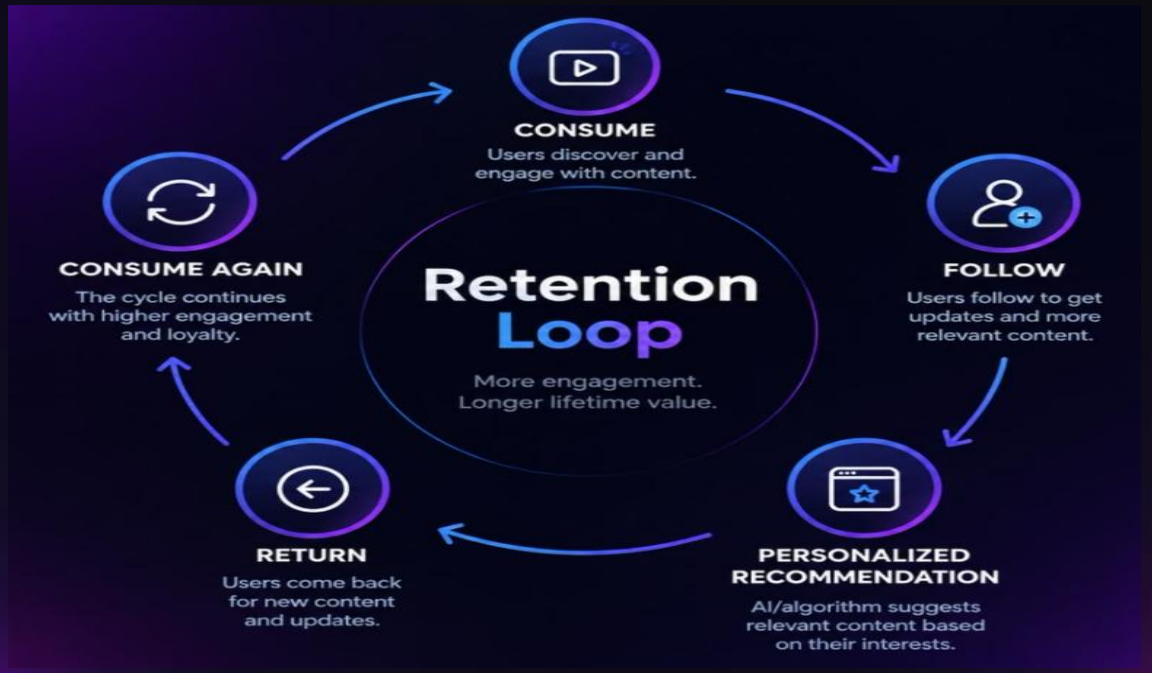

03 – Interview of the Week

Create a consistent weekly content moment:
“Interview of the Week”
A high-quality interview promoted across product, email and social channels

.

04 – Personalized Digest

Instead of generic notifications:
“3 new interviews match your interests this week.”

CONTENT & CREDIBILITY STRATEGY

Trust Is a Product Feature

For Interviews to become a trusted destination, credibility needs to be designed into the experience.

01 – Verify

Introduce a visible:

✓ **Verified Professional**

badge where appropriate.

02 – Standardize

Create editorial standards around:

Authenticity → Accuracy → Clarity → Transparency

03 – Add Context

Clearly show:
Interviewee role
Relevant experience
Industry
Interview date
Disclosure where applicable

04 – Create Feedback Loops

Allow users to:
👍 **Mark helpful**
👎 **Mark unhelpful**
⚠ **Report inaccurate information**

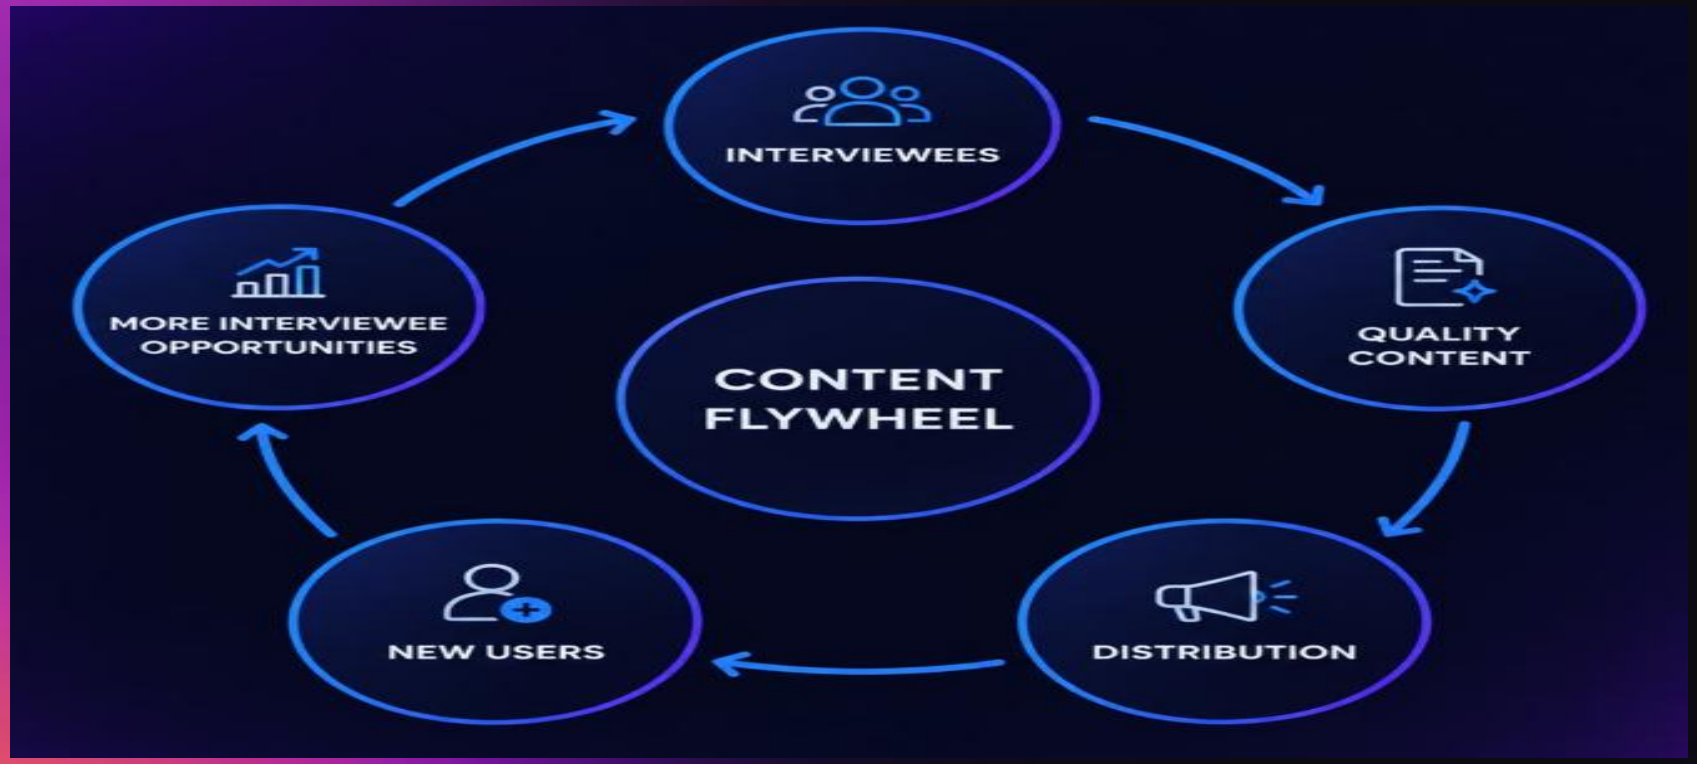

Key Principle

Credibility should be built into the content pipeline – not added after publication.

SUSTAINABLE CONTENT LOOP

Build a Self-Reinforcing Content Engine

The goal is not simply to publish more interviews.
The goal is to build a **repeatable system that improves content quality while reducing the effort required to produce and distribute it.**

Content Flywheel

More Interviewees → More Quality Content → More Distribution → More Users → More Interviewees

METRICS

Measure Repeat Value, Not Just Views

North Star Metric

Weekly Returning Interview Users
Number of users who consume an Interview and return to consume another Interview within the defined period.

Why this metric?

The objective is not simply to increase Interview views.
The objective is to create **repeat behavior and sustained user value**.

Guardrails

Content report rate
Low-quality interview rate
Notification unsubscribe rate

Supporting Metrics

Funnel	Metric
Discovery	Interview CTR
Activation	Interview start rate
Engagement	Completion rate / time spent
Value	Save & share rate
Retention	7-day / 30-day return rate
Trust	Helpful rating / report rate
Supply	Interviews published per week
Distribution	External traffic → interview starts

Key Principle

Optimize for quality of engagement and repeat usage – not vanity metrics

PRIORITIZED EXPERIMENTS & EXECUTION

What I Would Prioritize First

I would prioritize initiatives using: **Impact × Effort × Learning Potential**

1. Personalized Interview Recommendations

Hypothesis: Showing interviews relevant to user interests will increase consumption and repeat visits.

Test: Generic recommendations vs. behavior-based recommendations.

Measure: CTR, completion rate and repeat usage.

2. Follow Topics + Weekly Digest

Hypothesis: Users who follow topics will have a stronger reason to return.

Test: Topic following + personalized weekly digest.

Measure: Follow rate, digest CTR and 30-day retention.

3. Interview Repurposing

Hypothesis: Turning interviews into short-form content will create a scalable acquisition channel.

Test: Convert selected interviews into short clips, quotes and social posts.

Measure: Reach → product visits → interview starts.

4. Verified Interview Badge

Hypothesis: Visible verification will increase trust and content engagement.
Measure: Completion, saves and helpful ratings.

90-Day Execution

0–30 DAYS – FOUNDATION

Audit funnel → Define taxonomy → Establish credibility standards →
Baseline metrics

31–60 DAYS – ENGAGEMENT

Launch topic following → Recommendations → Weekly Interview → Personalized digest

61–90 DAYS – SCALE

Repurposing engine → Interviewee acquisition → SEO/social distribution → Optimize based on retention

THE STARTEGY IN ONE VIEW

DISCOVER
Make relevant Interviews visible inside existing user journeys.

↓

CONSUME
Deliver useful, credible and actionable perspectives.

↓

ENGAGE
Let users save, share and follow topics.

↓

RETURN
Use personalization and recurring formats to build a habit.

↓

GROW
Every engaged user increases distribution and creates opportunities for new interviewees.

The Core Growth Loop

Discover → Consume → Follow → Return → Share → Discover

The Content Loop

Interviewee → Content → Distribution → Users → Interviewee

End Goal

The goal is not more interviews. The goal is more users finding value in Interviews – and choosing to come back.

THANK YOU FOR THE OPPORTUNITY
